<b>Please note:</b> the substantive content of the 2026 NRI Roadmap Survey begins at Question 20 (with prior questions dealing with administrative and other information).
As such all submissions that are published include the responses submitted from Question 20 onwards only.
Part 2: Research themes  2.1 NRI comprises the assets, facilities and associated expertise to support leading-edge research and innovation in Australia and is accessible to publicly and privately funded users across Australia and internationally. We are seeking your input on possible directions for future national-level investment - i.e., where the requirements are of such scale and importance that national-level collaboration and coordination are essential.
<ul> <li>The 2021 Roadmap used a challenge framework to support NRI planning and investment. With this in mind, consider likely future research trends in the next 5 - 10 years, and with respect to one or more of the 8 challenge areas identified in the 2021 Roadmap as listed below:</li> <li>describe emerging research directions and the associated critical research infrastructure requirements that are either not currently available at all, or not at sufficient scale and</li> <li>describe current national infrastructure requirements that you anticipate will no longer fit the definition of NRI in 5-10 years.</li> <li>Do not limit your commentary to NCRIS funded capabilities.</li> </ul>

## Building a secure and resilient nation

The mathematical sciences are essential for security and resilience. Existing mathematics underpins daily technologies such as medical MRIs, image compression, and internet security protocols, but these are each based on mathematics discovered decades or even centuries before it was applied to daily life. Research in mathematics is an ongoing endeavour, and investment in today's fundamental research prepares Australian society for the technological and security challenges of the future. Over and over again, mathematics developed for its own sake has turned out to provide exactly the right framework to solve technical problems the mathematicians never conceived of. The time lag between theory and application can be long, but the track record of "pure" mathematics eventually being applied is remarkable. Basic research – theory-building inquiry that helps us understand the world we live in – requires visionary government investment; market-driven funding is insufficient because the time to return is too long and too uncertain. Nevertheless, a strategy that neglects fundamental research is short-sighted and unforgivably unambitious. Technological breakthroughs can only be built on a foundation of deep knowledge. It may sound efficient to investigate only the theories that have concrete applications, but this is unrealistic in practice: we can't bypass the slow accretion of knowledge and just solve narrow technical problems. We don't know all the challenges we'll face in the future, but we can equip ourselves to respond to surprises by investing in a broad and deep knowledge base across all fields of inquiry.

Q35.

2.3 The case for a new NRI capability, or enhancements to existing capabilities, typically emerges through advocacy from research communities clustering around rigorously identified needs and goals. Such a concept could respond to a requirement for novel or expanded capacity within a domain, or across domains, and must be such that it could only be made available with national-level investment.

If you have identified such a requirement, briefly describe the need, the proposed infrastructure capability, the medium-term goals, impacted research communities, and the timeframe over which you advocate its establishment. Your response can include links to relevant existing reports.

Australia has an opportunity to be a global leader in mathematical research, and one clear ingredient for this would be a secure funding line for a national research institute in the mathematical sciences. Sustained investment in the field would strengthen domestic research capacity and establish the nation as a focal point for international collaboration/

Q36.

## Part 3: Industry perspectives

This section is seeking input specifically from industry-based respondents. Other respondents can skip this section.

Recommendation 6 of the <u>2021 Roadmap</u> related to improvements in industry engagement with NRI. To complement work on this topic that has occurred since then, we are seeking additional advice on NRI requirements as perceived by current or potential industry-based users.

Q37.

3	1	Have '	VOLL	or v	vour d	organisa	tion)	) interreact	ted wit	h or	used A	Austra	lia's	NF	श?
•		11000	,		,	or garnoa		,			4004	tacti a	1100		

Yes

No

Q38.

3.2 If so, please briefly outline the NRI capabilities you (or your organisation) have interacted with or used. Do not limit your response to NCRIS capabilities.

This question was not displayed to the respondent.

Q39.

3.3 Please indicate your (one or more) primary reasons for interacting with NRI:

This question was not displayed to the respondent.

Q40.
3.4 If you answered no, please indicate your (one or more) primary reasons:
☐ I did not know about it
Other facilities suit my needs better
☐ I would like to, but cannot get access due to geographical location
☐ I would like to, but believed that access was only available to academic researchers
✓ I am not aware of any capability that meets my needs
Other (please specify)
Q41.
Part 4: Other comments
4.1 Please elaborate on any of your above responses or add any other comments relevant to the
development of the 2026 Roadmap. Your response can include reference or links to existing reports that you recommend be considered during the 2026 Roadmap development process.
